# Guttmacher-Lancet definition of Sexual and Reproductive Health and Rights

*Sexual and reproductive health is a state of physical, emotional, mental, and social **well-being in relation to all aspects of sexuality and reproduction**, not merely the absence of disease, dysfunction, or infirmity.*

*A positive approach to sexuality and reproduction should recognize the part played by pleasurable sexual relationships, trust, and communication in the promotion of self-esteem and **overall well-being**.*

*All individuals have a **right to make decisions** governing their bodies and to access services that support that right.*

*Achievement of sexual and reproductive **health** relies on the realization of sexual and reproductive **rights**.*

# Agenda 2030 and SRHR

- ✓ Eliminate violence against women and girls
- ✓ Eliminate all harmful practices such as child, early and forced marriage, and female genital mutilation/cutting
- ✓ Reduce maternal deaths
- ✓ Ensure universal access to SRHR

Towards ZERO  
Unmet need for family  
planning

Towards ZERO  
Preventable maternal  
deaths

Towards ZERO  
Gender-based violence and  
harmful practices

# Knowledge gaps

- Social norms are a barrier/enabler of SRHR, but there is no global baseline for SRHR social norms
- Existing data cover limited aspects of SRHR and/or limited subpopulations
- Need for comprehensive measures to tap into intersecting dimensions of SRHR
  - Across whole populations
  - In Sub-Saharan Africa

## Social norms are ...

- ... the unwritten social expectations or rules that influence behavior by prescribing what is expected, allowed, or sanctioned in specific circumstances
  - ... both harmful and supportive
  - ... open to change
- *Not systematically, comprehensively measured for SRHR quantitatively across settings and time, incl. areas with most needs*

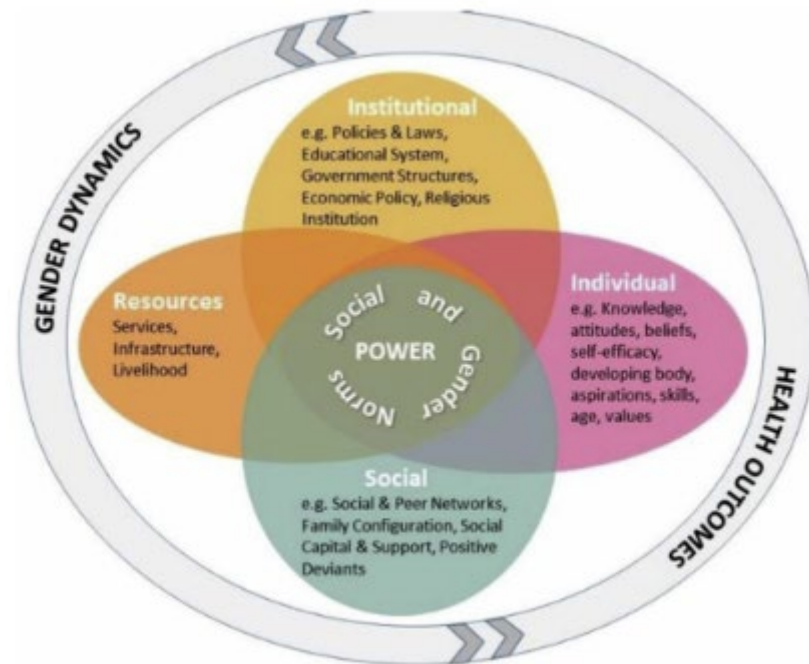

Figure 1. Conceptual framework highlighting centrality of social and gender norms, and power, for ASRH.

To identify an **Index of Support for Sexual and Reproductive Health and Rights (SRHR)** that can be compared across countries and over time, based on data from the World Values Survey

Contributing to closing a relevant data gap using an instrument at scale

Informing interventions, policies and programs

Contributing to achieving the Sustainable Development Goals

*“Without gender data, there is no credible path to achieving the SDGs. Today, we lack data to monitor 80% of the indicators for SDG 5 on gender equality”*

Dr. Phumzile Mlambo-Ngcuka, UN WOMEN

# World Values Survey

- 10 Population-representative samples on social norms and values
- 10 500.000 face-to-face interviews, in >90 countries, since 1981
- 10 Open access to all time series data, online analysis tool
- 10 Actionable input for research, advocacy & policy

The Inglehart-Welzel World Cultural Map (2020)

Source: World Values Survey (1988-2022) [www.worldvaluessurvey.org](http://www.worldvaluessurvey.org)

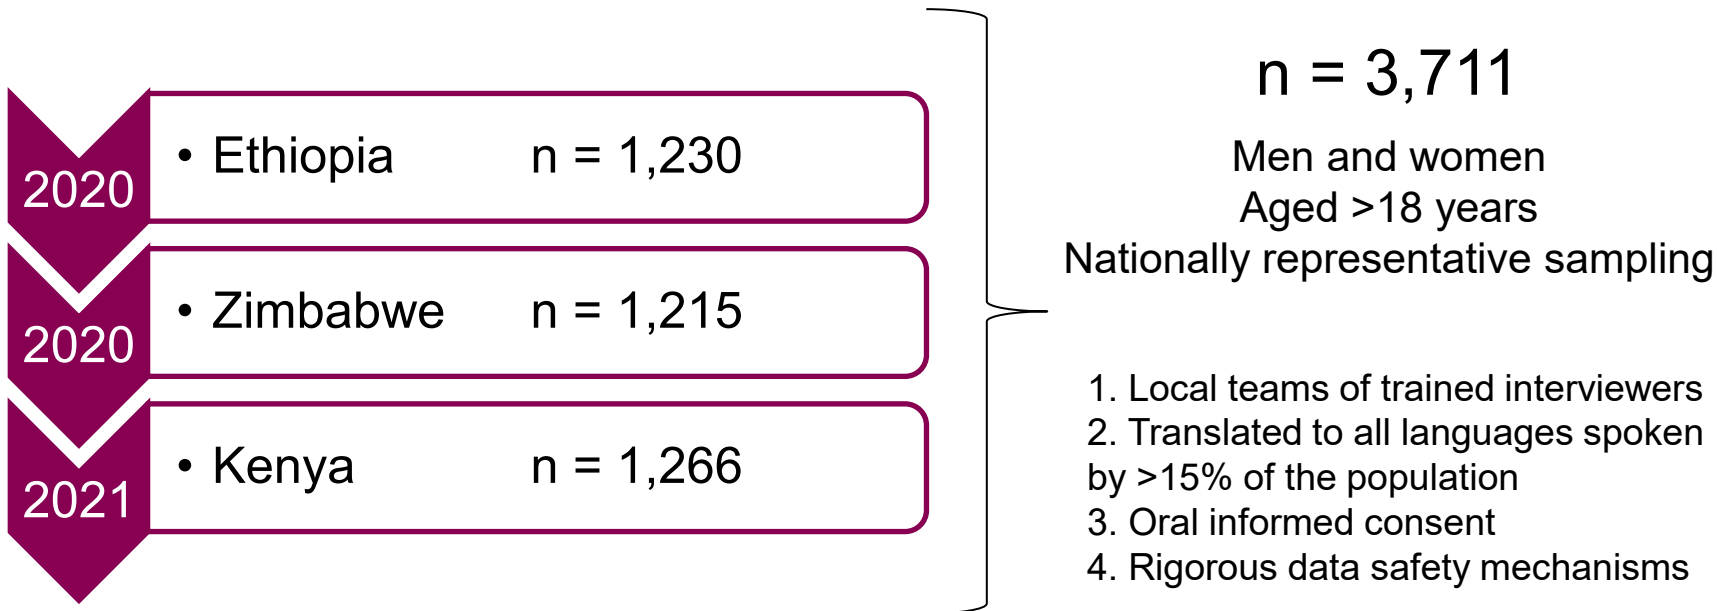

# World Values Survey Coverage

**Grey countries**  
=  
**No WVS data**

## Study Setting and Data Collection in wave 7 of WVS

# Measures

## WVS Core Questionnaire

- 290 Likert items
  - Democracy/corruption
  - Security
  - Migration
  - Women's role in society
  - Life satisfaction/happiness
  - Religious values
  - Social capital & confidence in institutions

*“Generally speaking, would you say that most people can be trusted or that you need to be very careful in dealing with people?”*

## SRHR & Gender Module

- 50+ Likert items
- Previously validated
  - Gender roles
  - LGBTQ rights
  - Early marriage and childbearing
  - Comprehensive sexuality education
  - Contraception and abortion
  - Infertility
  - Perceived level of free choice and control over reproduction

*“Contraceptives should be available for everyone, whether or not one is married”*

# Statistical analysis (step 1)

- Exploratory factor analysis
- Polychoric correlations, principal component analysis (PCA), scree plots, and parallel analysis (PA) for initial assessment
- Iterated principal factors (IPF) with oblique rotation to determine the appropriate number of factors
- Criteria:
  - Parsimony
  - Factors with at least three items loading  $>0.40$  and item uniqueness of  $<0.70$
  - Conceptually meaningful
  - Cronbach's  $\alpha$  of  $\geq 0.7$

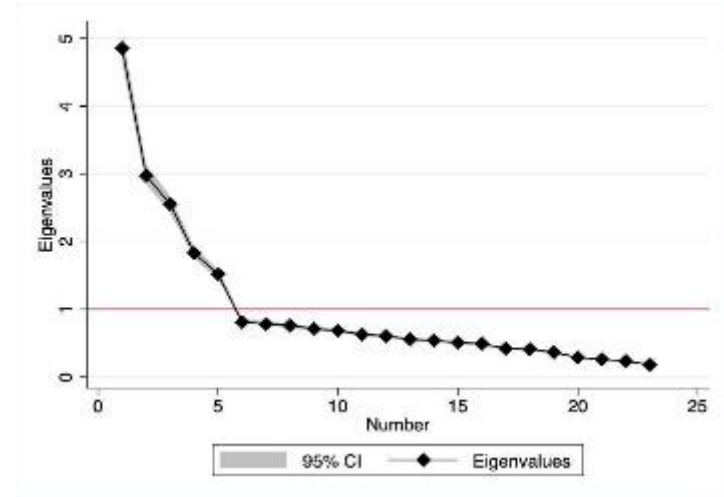

# Statistical analysis (step 2)

- Multivariate linear regression models to assess scoring on the Index
- Sociodemographic covariates
  - Age groups
  - Sex/gender
  - Place of residence
  - Highest educational level
  - Relationship status

# SRHR Support Index

- A 23-item five-factor solution (Cronbach’s alpha=0.80)

1. Sexual and reproductive rights
2. Neighborhood sexual safety
3. Gender-equitable relationships
4. Masculinity norms
5. SRHR interventions

- Combined into a comprehensive “SRHR Support Index”, standardized on a 1–100 scale with higher values indicating more support for SRHR

# SRHR Support Index – Distribution of Support per Sub-index

**SRHR Support Index**

**Sub-index 1: Sexual & Reproductive Rights**

**Sub-index 2: Neighborhood Sexual Safety**

**Sub-index 3: Gender-Equitable Relationships**

**Sub-index 4: Masculinity Norms**

**Sub-index 5: SRHR Interventions**

## Variations across countries and subgroups

- Kenya (45.48, SD=16.78)
  - Ethiopia (40.2, SD=13.63)
  - Zimbabwe (32.65, SD=13.77)
- 
- Highly educated, urban & single individuals were more supportive of SRHR (except in Ethiopia)
  - Support did not differ significantly by sex
  - Among men, younger age and urban residence were linked to more support for SRHR

## Strengths of the SRHR Support Index

- A comprehensive measure of support for SRHR
- Based on nationally representative data
- Robust across countries and population subgroups
- Can be used to track progress over time

# The SRHR Support Index ...

- ... can be used as a **baseline** if integrated into global surveys for trends analysis and facilitates future research on SRHR norms and values
- ... offers a tool to **further advance our understanding of attitudes and norms as barriers or facilitators to SRHR globally**, thereby guiding the tailoring of interventions and policy

## The SRHR Support Index ...

- ... can be used as a **baseline** if integrated into global surveys for trends analysis and facilitates future research on SRHR norms and values
- ... offers a tool to **further advance our understanding of attitudes and norms as barriers or facilitators to SRHR globally**, thereby guiding the tailoring of interventions and policy

## Thank you!

**Table 2** Exploratory factor analysis

<b>Guttmacher-Lancet SRIIR dimension</b>	<b>Variable</b>	<b>Loading</b>
<b><i>FACTOR 1: Sexual and Reproductive Rights</i></b>		
Non-discrimination related to sexuality, sexual orientation, and gender identity	Justifiable: Homosexuality	0.86
Reproductive empowerment	Justifiable: Abortion	0.84
Consensual, non-violent relationships	Justifiable: Prostitution	0.88
	Justifiable: For a man to beat his wife	0.72
	Justifiable: Divorce	0.66
Satisfying sexual life	Justifiable: Sex before marriage	0.76
	Justifiable: Having casual sex	0.83
<b><i>FACTOR 2: Neighborhood Sexual Safety</i></b>		
Consensual, non-violent relationships	How often in neighborhood: Sexual assault/rape	0.71
	How often in neighborhood: Women and girls trading sex for money	0.83
	How often in neighborhood: Men and boys hurting women and girls	0.92
	How often in neighborhood: Men and boys making unwanted sexual comments or gestures toward girls or women	0.87

**Table 2** Exploratory factor analysis (continued)

Guttman-Lancet SRHR dimension	Variable	Loading
<b><i>FACTOR 3: Gender-Equitable Relationships</i></b>		
Gender-equitable relationships	A man should always have the final say about decisions in his relationship or marriage	0.56
	There is no doubt that gainful employment is good but that what most women really want is a home and children	0.73
	On the whole, family life suffers when women work full time	0.58
	It is a man's job to earn money and a woman's job to take care of home and family	0.67
Consensual, non-violent relationships	If a man has a girlfriend or wife, he should know where she is all the time	0.60
<b><i>FACTOR 4: Masculinity Norms</i></b>		
Gender-equitable relationships	A man who talks a lot about his worries, fears, and problems doesn't reserve respect	0.54
	A real man should have as many sexual partners as he can	0.79
	A man should use violence, to get respect, if necessary	0.82
<b><i>FACTOR 5: SRHR Interventions</i></b>		
Reproductive empowerment	Women should have access to safe abortion services to terminate an unwanted pregnancy	0.53
	Contraceptives should be available for everyone, whether or not one is married	0.58
	A couple who cannot conceive should have access to infertility services	0.60
SRH information	Sexual education helps people make informed decisions	0.62

**Table 1** Sociodemographic characteristics of the study sample (n=3,113)

<b>Variable</b>	<b>n</b>	<b>%</b>
<b>Age</b>		
<i>18–24</i>	862	27.69
<i>25–29</i>	614	19.72
<i>30–39</i>	776	24.93
<i>40–49</i>	426	13.68
<i>50+</i>	435	13.97
<b>Sex</b>		
<i>Man</i>	1,595	51.24
